

JONES&VINING

JonesEVA

Overview

EVA is the go-to solution for cost-effective and light-weight sock-liners. Originally designed to hold up to the rigors of running shoes, EVA remains one of the best shock absorption materials available today.

An easily moldable synthetic material used to increase the cushioning capacity in the midsole of a shoe, EVA footbeds are soft, light and flexible. Jones & Vining's EVA is made up of hundreds of thousands of air-filled foam cells which create greater comfort in any shoe.

JonesEVA attributes:

- 1 Excellent shock absorption
- 2 Lightweight
- 3 Customized hardness allows for controlled comfort
- 4 Can be used as an insole alone or in combination with other J&V open cell foams
- 5 Made in Vietnam.
