

Polyurethane: Lightweight and Durable PU Outsoles

Overview

Jones & Vining molds polyurethane outsoles in China, Vietnam and the United States. With 40 years of PU molding experience, our understanding of the manufacturing process and ability to meet customer requirements is second to none. We use the highest quality material systems in a wide range of options.

Polyurethane outsoles are available in:

- 1 Single-density (standard or slip-resistant), dual-density (with post-applied elastomeric pads), and triple-density (with cocoon interior, midsole and outsole)
- 2 Custom specialty-molded products with the highest quality standards
- 3 Available in oil and slip-resistant options, as well as specialty colors, stains and finishes.

Polyurethane: Cushioning and Resilient PU Midsoles

Overview

Jones & Vining molds polyurethane midsoles in China, Vietnam, and the United States. With 40 years of PU molding experience our understanding of the manufacturing process and ability to meet customer requirements is second to none. We use the highest quality material systems in a wide range of options.

Polyurethane midsoles are available in:

- 1 Molded as individual components or directly to PU and Rice Rubber shells
- 2 A wide variety of density and firmness options to meet your performance needs
- 3 High volume production of specialty colors, stains and finishes.
